

Liposuction Manchester | Welcome

What Is Liposuction?

Liposuction Manchester is a surgical procedure performed on different areas of the body to remove excess fat from deeper layers of the subcutaneous tissue with the aim of improving the shape and contour of the body. This surgery is almost always performed for cosmetic purposes and over the years much advancement has been made to give better results. The cost for Liposuction Manchester depends on a variety of important factors such as the skill and experience of the surgeon, the health care facility, the techniques employed during the surgery and the number of body areas treated.

Liposuction Techniques

Typically liposuction Manchester is done by inserting a tiny stainless steel cannula in to the fatty layer of subcutaneous tissue under the skin. This cannula is connected to a powerful suction pump with works to create minute channels in the layer of fat and it is the collapse of these tunnels that results in the better shape and contour of the body seen after the surgery. Many

modifications in this traditional technique of liposuction Manchester have been made to ensure better results.

- **Water Jet Associated liposuction** – this is a more gentle technique compared to traditional liposuction techniques. In this procedure, a saline stream under high pressure is used to dislodge fat and remove adipocytes simultaneously. This means that this process removes fat by loosening them for gentle removal rather than by destroying the cells.
- **LipoLite** – this technique is an especially important advancement in the field of liposuction Manchester. While this technique generally costs more than most traditional procedures, this technique is chosen by people for its better cosmetic results and also because it is the least invasive. Laser light of the wavelength 1064nm is pulsed in to the fat layer from a fiber optic laser and tiny cannula to essentially melt away the excess fat.
- **CoolLipo** – this is also a relatively newer technique more effective in treated smaller body areas such as the neck, chin and face; laser wavelengths are employed in this procedure to tone body areas and make skin more firm.
- **Tumescent liposuction** – this is a very commonly used

technique in which huge volumes of diluted local anesthesia are administered in the fat layer making the areas tumescent or swollen and firm thereby improving the contour and shape of the body area being treated. This technique is chosen over others mainly for the reason that local anesthesia is safe and because its effects persist many hours after the surgery you will not have to take too many heavy painkillers during the post-op period.

The most important factor that decides how much liposuction Manchester will cost you is the body area you choose to have treated.

- Upper and lower abdomen -- \$3,000 to \$7,500
- Arms -- \$1500 to \$4,000
- Buttocks -- \$1,500 to \$4,500
- Breasts -- \$3,000 to \$7,500
- Chin, jowls, neck or cheeks -- \$2,000 to \$4,500
- Flanks -- \$2,000 to \$5,000
- Knees and inner thighs -- \$2,000 to \$5,000
- Knees and anterior thighs -- \$2,000 to \$5,000
- Outer thighs -- \$1,600 to \$5,000
- Hips or waist -- \$1,600 to \$5,000

About Manchester

Manchester is a large thriving city in the north of England. It has two premier league football clubs, an International airport and a very multi-cultural community. It is also home to the largest student community in the country with three major universities. Manchester was

also the host of the 2002
Commonwealth Games which led to a
major sporting redevelopment.
